## Low-Voltage Lighting Projector

**Second life**

**Solo**

**Powerful**

**Soft**

### Overview

The legendary SVOBODA with the Chromlech touch!

Designed by the famous Czech scenographer, Josef Svoboda, this fixture was intended to create dramatic scenery using only light. Its nine low-voltage lamps ensure the traditional Svoboda generates beams of light that are extremely bright, yet soft at the same time. It gives lighting designers the ability to generate light curtains for back-lighting, down-lighting or full front light

The SVOBODA 2.0 by Chromlech is the striking combination of this classic fixture and the award-winning Gleamer low-voltage dimmer. The individual control and dimming of each lamp allows a wide range of lighting effects that were previously impossible to achieve, such as three-dimensional chases, individual lamp flashes, alternate pulses, etc.

The SVOBODA 2.0 effects can be obtained using a completely new system or, for existing traditional Svoboda fixtures, through the installation of the SV106 retrofit cabling kit. In both cases, the use of the revolutionary Gleamer is necessary.

Gleamer is the first dedicated low-voltage dimmer in existence and the perfect control partner for creative use of Svoboda's unique lighting abilities. In combination, they are the ultimate flexible tools for the creation of custom lighting effects for rock concerts and live events.
